KELECHI EMMANUEL USULOR

Ethical Hacker | Web Application Penetration Tester | Bug Bounty Hunter

Lagos, Nigeria | ekelechi4321@gmail.com | +234 816 498 6319 | kelechi-usulor.github.io

HackerOne: kelly001 | Bugcrowd: kelechiemmanuel | GitHub: kellyemmy

PROFESSIONAL SUMMARY

Ethical hacker and bug bounty hunter specialising in **web application and API security testing**. Active on HackerOne and Bugcrowd, where I find, validate and responsibly disclose vulnerabilities with clear reproduction steps, demonstrated impact and practical remediation advice. I combine an attacker's mindset with hands-on front-end development and QA experience, so I understand how security bugs are introduced and how to help teams stop shipping them. Open to bug bounty collaborations, penetration testing engagements and security-focused development roles.

CORE COMPETENCIES

Web & API Security: authentication and session management, access control (IDOR / BOLA), cross-site scripting (XSS), SQL injection, SSRF, security misconfigurations, business logic flaws.

Methodology: reconnaissance and attack-surface mapping, manual testing alongside automated scanning, proof-of-concept development, vulnerability triage and clear technical reporting.

Development & QA: HTML5, CSS3, JavaScript, responsive design, functional testing, debugging, cross-browser compatibility, Git and GitHub.

SECURITY TOOLKIT

Recon & Discovery: Nmap, Subfinder, Amass, httpx, Gobuster, ffuf, gau / Wayback

Proxy & Web Testing: Burp Suite, OWASP ZAP, Postman, Browser DevTools

Scanning & Exploitation: Nuclei, SQLMap, Nikto, XSS Hunter, Metasploit

Utilities & OS: Kali Linux, Wireshark, CyberChef, Bash

PROFESSIONAL EXPERIENCE

Bug Bounty Hunter & Independent Security Researcher

HackerOne and Bugcrowd | Remote | Present

- Conduct manual and tool-assisted security testing of web applications and APIs across bug bounty programs, strictly within each program's scope and rules of engagement.
- Map attack surfaces through subdomain enumeration, content discovery and technology fingerprinting, then prioritise high-impact areas such as authentication, authorisation and sensitive business workflows.
- Validate findings with minimal, non-destructive proofs of concept and write reports covering steps to reproduce, business impact and recommended fixes.
- Follow responsible disclosure practices and communicate professionally with triage teams and program owners.

SELECTED PROJECTS

Enterprise Risk Management (ERM) Platform (**Live Demo** | **Source**)

Designed and built a high-fidelity B2B dashboard for security audits as a single-page application with dynamic routing and complex form validation, using HTML, CSS and vanilla JavaScript.

PORA - Compliance Data Infrastructure

Building structured datasets of politically exposed persons (PEP) and sanctions data across Africa to support compliance and due diligence work.

Personal Portfolio (**kelechi-usulor.github.io**)

Built a fast, responsive, framework-free portfolio with a light/dark theme, accessible markup and SEO metadata, deployed with Git and GitHub Pages.

EDUCATION

Ordinary National Diploma (OND)
